ALOK NATH

Email: nath.alok59@gmail.com | Phone: +91-9319855061
LinkedIn: linkedin.com/in/alok1nath

TECHNICAL SKILLS

Frontend: React.js, JavaScript (ES6+), Redux Toolkit, Context-API, Responsive Design, Next.js, Module Federation, Component Composition, Scalable UI Architecture

Frontend Tooling: Webpack, Babel, Vite, Yarn, npm, Bundle Analysis, Code Splitting, Tree Shaking, Lazy Loading, React Hooks

Testing & Quality: Code Reviews, Playwright

API & Integration: REST APIs, JSON APIs, API Integration, Backend Integration, Asynchronous Data Flows

Performance: Lazy Loading, Code Splitting, Tree Shaking, Memoization, Bundle Optimization, Rendering Optimization, Page-load Optimization

Accessibility & Compatibility: Web Accessibility, W3C Standards, Semantic HTML, Responsive Design, Cross-browser Compatibility, Device Compatibility

Backend & Cloud: Python, Fast API, Streamlit, AWS (AWS Lambda, API Gateway, S3, IAM, AWS Bedrock, AWS CloudFront, EC2), GCP (BigQuery, DataFlow, Cloud Storage, Compute Engine (VM), IAM)

Leadership & Collaboration: Technical Leadership, Mentoring, Code Reviews, Architecture Reviews, Cross-functional Collaboration, Technical Problem Solving, Product/QA/Backend Collaboration

DevOps: Git, Jenkins, CI/CD, Docker, SonarQube

PROFESSIONAL EXPERIENCE

SRS Infoway | Frontend Developer | Jun 2025 – Apr 2026 | Chennai

- Develop and maintain production-grade web applications using React, Next.js, TypeScript, Redux and reusable frontend components, following established application architecture and UI standards.
- Build reusable and maintainable React components using hooks, state management, component composition, and modular frontend patterns and resolve production issues across frontend functionality, API integration, accessibility, performance, and browser compatibility.
- Having hands-on WordPress development experience.
- Used modern frontend build and development tooling including **Webpack, Babel, Vite and Yarn** to support modular application development, bundling and optimized production builds.
- Experience with Elementor, WooCommerce, and custom theme/plugin customization.
- Developed comprehensive automated tests using **Playwright** covering component, functional and regression scenarios.
- Worked with modern authentication technologies including **OAuth** and **JWT** for secure identity and authentication workflows.

- Built responsive applications optimized for desktop, tablet and mobile while addressing **accessibility, W3C standards and cross-browser compatibility**.
- Improved accessibility and frontend quality by up to 80% through remediation of accessibility and performance issues and alignment with web standards.
- Conducted code reviews and provided constructive feedback focused on **maintainability, testing, coding standards and frontend best practices**.

Biomedicare Laboratories | Senior Software Engineer | Aug 2024 – May 2025 | Delhi (Fixed Term Project)

- Architect and build scalable **RAG** system using **Python (streamlit)**, implementing backend APIs, business logic, and reusable service components.
- Implemented reusable component patterns to improve consistency and development productivity.
- Having hands-on WordPress development experience.
- Experience with Elementor, WooCommerce, and custom theme/plugin customization.
- Designed scalable API layers separating **business logic, data access, and AI orchestration** components.
- Hands on experience on AI coding tools (Github Co-pilot) for velocity
- Mentored engineers and contributed to architecture discussions, technical standards and a culture of continuous improvement.
- Ability to perform in-depth code reviews and mentor architects, senior engineers, and engineers across the stack.

ACL Digital | Technical Lead | Nov 2021 – Jun 2024 | Bengaluru

- Led frontend development for enterprise applications using **React, Next.js, TypeScript, Redux, Python**.
- Designed and implemented reusable React components and scalable frontend architecture across **15+ services**, improving maintainability and consistency.
- Built **API-driven React applications**, integrating backend services and APIs across 10+ endpoints and validating frontend behavior against backend responses.
- Implemented **Micro Frontends** enabling independently developed and deployed application modules.
- Improved frontend performance and page-load experience by approximately **60%** through application and rendering optimizations.
- Improved **W3C compliance by approximately 80%** through accessibility and standards-based frontend development.
- Developed automated tests and participated in **unit testing, regression validation, debugging, code reviews, and quality improvement activities**.
- Worked extensively with **Git, Jenkins, CI/CD, Docker**, and enterprise development workflows, investigating failing builds and quality issues.

Robosoft Technologies | Project Lead | Sep 2021 – Nov 2021 | Bengaluru

- Designed reusable frontend components and application modules using React and modern JavaScript technologies.
- Having exposure to test driven architecture.

R Systems | Project Lead | Dec 2020 – Sep 2021 | Noida

- Developed production web applications using React and modern frontend technologies with a strong focus on **reusability, accessibility, performance, and maintainability**.
- Implemented accessibility improvements using semantic HTML and standards-based frontend practices, achieving accessibility improvements of up to **60%**.
- Developed and maintained automated unit tests that helped reduce production defects by up to **70%** across supported applications.

Cigniti | Project Lead | Aug 2020 – Dec 2020 | Bengaluru

- Developed modular frontend solutions with emphasis on accessibility, maintainability, and performance.
- Developed enterprise **full-stack applications** using JavaScript, REST APIs, and Python.

BOLD | Senior Software Engineer | Jul 2017 – May 2020 | Noida

- Integrated frontend applications with backend services and APIs for enterprise workflows.
- Improved user engagement by **40%** through responsive, accessible, and optimized application experiences.
- Improved data extraction accuracy by **40%** and reduced processing time by **80%** through application and workflow optimization.

Honeywell | Senior Software Engineer | Jan 2015 – Jul 2017 | Hyderabad

- Developed enterprise **full-stack applications** usingJavaScript, REST APIs, and Python.
- Designed reusable UI components and modular application structures.
- Built responsive applications optimized for performance, accessibility, and cross-browser compatibility.

Samsung | Senior Software Engineer| Jan 2013 – Dec 2014 | Noida

- Performed cross-browser and device compatibility validation across **200+ Smart TV applications**, identifying and resolving frontend compatibility issues.
- Experienced working with B2C products having high traffic Consumer facing Apps.
- Integrated frontend applications with backend and cloud-based services while ensuring reliable data processing and user experiences.

EDUCATION

Master of Computer Applications (MCA), GGSIPU, 2009
Bachelor of Computer Applications (BCA), GGSIPU, 2006

PROJECT HIGHLIGHTS

AI Knowledge Assistant –

- Built dynamic React interfaces rendering configurable components using metadata-driven UI patterns.
- Integrated multiple third-party AI services securely using REST APIs.
- Integrated LLM APIs for document summarization and contextual question answering.

- Developed backend APIs using FastAPI to support AI workflows and frontend integration.
- Integrated REST APIs and asynchronous data flows with optimized caching strategies.

Technologies: React.js, Python, AWS Bedrock, Titan Embedding, OpenSearch, Docker, AWS, Ollama, Streamlit

ChatGPT Clone Using Ollama + LLMs –

- Built a local AI chatbot experience similar to ChatGPT
- Integrated Ollama to run and interact with open-source LLMs locally
- Created a conversational interface for real-time question answering
- Explored how modern AI assistants work behind the scenes.

Technologies: Ollama, AWS-BedRock, Streamlit, Open-source LLMs, Open Search

Loan Legal Coach–

- Developed AI-powered legal assistant using Python, AWS Bedrock, and React.js.
- Built backend REST APIs using Express for AI inference workflows.
- Integrated Titan Embedding models for semantic search.
- Designed Retrieval-Augmented Generation (RAG) workflow for document-based question answering
- Containerized services using Docker and automated deployments using Jenkins.

Technologies: Titan Embedding, RAG,Python, Docker, Jenkins, Next.js, AWS(Bedrock, S3, Load Balancer, Auto Scaling)

Ford UK–

- Developed reusable UI architecture that accelerated future feature development and simplified application maintenance.
- Improved deployment efficiency through CI/CD automation.
- Optimized application scalability, performance, and maintainability using modular frontend development practices.

Technologies: React.js,Python, Next.js, Docker, Jenkins, GCP, Context API, Express

ResumeBuilder–

- Designed a scalable React application using reusable component architecture, modular state management, and REST API integrations.
- Optimized application rendering performance using memoization, lazy loading, and code splitting.
- Built reusable React components following enterprise coding standards.
- Supported CI/CD deployments and release validation.

Technologies: React.js, HTML, SASS, JavaScript, Docker, AWS(S3, Load Balancer, Auto Scaling), Redux
